SKILLS

Hard Skills:

- CI/CD: Jenkins, GitHub Actions, Azure pipelines
- Containerization using Docker and Kubernetes
- Infrastructure as code: Ansible, and Terraform
- SCM: GitHub, Bitbucket
- Scripting language: Python, Bash

Base Knowledge:

- Monitoring: Grafana, Prometheus
- Secret management: Hashicorp Vault
- Azure services and Azure DevOps
- Internal development portal with Backstage

Languages:

- Vantage: English

CERTIFIED

- Certified Kubernetes Security Specialist (CKS)
- Certified Kubernetes Administrator (CKA)
- Certified Kubernetes Application Developer (CKAD)
- Google Cloud Certified - Professional Cloud Architect
- Google Cloud Certified - Professional Cloud DevOps Engineer
- AWS Certified AI Practitioner

AWARD

- Bosch Performance Award Q1-2025
- Bosch Performance Award Q4-2024
- Bosch Performance Award Q2-2023

PROFILE

DevOps Engineer with over 3 years of experience in automating infrastructure, optimizing CI/CD pipelines, and ensuring system reliability. Skilled in Kubernetes, Docker, Jenkins, Terraform, and monitoring tools like Grafana and Prometheus. Focused on improving deployment efficiency and collaboration between development and operations teams.

EDUCATION

Bach Khoa University (HCMUT)

The Training Program of Excellent Engineers in Vietnam (K2017)

Bachelor of Engineering (BE) in Electrical and Electronics Engineering

Grade: Good

WORK EXPERIENCE

Bosch Global Software Viet Nam — 2/2023 - Present

DevOps Engineer

Project: 2WP AI Automation Workflow

- Built Human-in-the-Loop (HITL) automation workflows using GitHub Actions and GitHub Issues.
- Deployed and managed LiteLLM, Langfuse, and GitHub ARC on an OpenShift cluster for high availability and scalability.
- Routed AI models via Azure AI Foundry, evaluated agent outputs using Langfuse, and secured credentials with OpenBao.

Project: Radar generation 6

- Provisioned and managed Azure Virtual Machine Scale Sets (VMSS) and Azure Managed DevOps Pools (MDP) via Terraform for scalable CI/CD agent infrastructure.
- Managed on-premise machines using Ansible, configuring them as self-hosted Azure DevOps agents.
- Delivered CI/CD pipelines tailored for the automotive software domain, ensuring efficient and reliable software delivery across release cycles.
- Optimized Azure Pipeline build performance by introducing a release caching strategy, significantly reducing pipeline execution time and saving NAT gateway costs.
- Developed Devcontainer environments to streamline developer workflows across engineering teams, collaborated in developing Python-based CLI tooling to replace and simplify complex bash/shell CI/CD scripts, improving usability and extensibility.

Project: Department DevOps team

- Implemented and maintained on-premise Kubernetes clusters serving multiple teams across staging and production environments. Deployed and configured GitHub Actions Runner Controller (ARC) for scalable, containerized CI workloads.
- Developed a proof-of-concept Backstage portal to enable self-service provisioning of GitHub runner services and CI/CD workflow templates for customer projects.
- Built GitOps delivery workflows using ArgoCD and GitHub Actions for automated application deployment.
- Deployed and configured Jenkins master, provisioning scalable build agents as a managed service on Kubernetes cluster.
- Streamlined software delivery for in-house tools to help the business win customer deals.
